

Figure 1.

Contacts aged < 6 months: evaluate with medical history, focused physical exam, CXR and TST

See Note 1

Focused physical exam indicates TB disease?
See Note 2

Yes

No

Symptoms consistent with TB disease?
See Note 3

Yes

No

Perform 2-view CXR. Is CXR abnormal?
See Note 5

Yes

No

Perform initial TST. Is TST reaction $\geq 5\text{mm}$?
See Note 6

Yes

No

Begin window prophylaxis for TB infection with DOT provided by local health department personnel. Repeat TST at 6 months of age. See Note 8

Complete full treatment course for TB infection with DOT provided by local health department personnel.

See Note 7

Perform second TST. Is TST reaction $\geq 5\text{mm}$?
See Note 6

Yes

No

No further evaluation or treatment required.

Fully evaluate for TB disease. If treatment necessary, begin 4-drug regimen with DOT provided by local health department personnel.

See Note 4
